Space for
Optimization!

User specific
customization possible!

clavisOptimo:

Packaging parcels optimally by using the
SAP packaging materials calculation routine

Initial Situation:

You are picking your products in your warehouse directly into shipping containers? Then you know the problem: It is often noted only at the end of the picking process that the chosen packing material is sometimes too large or even too small. The consequence: High packing costs and additional effort for repacking into suitable containers. The picking process is seriously disrupted – often even personal and spatial resources must be provided exclusively for these situations.

Solution:

clavisOptimo solves the problem even before it has a chance to occur. By early identification of the appropriate packing material you lower your packing costs and accomplish a permanent process reliability.

Soon your pickers can be sure that it will fit!

*Optimized picking
saves time and money*

Advantages:

- Calculation of the suitable packing containers before picking
- Confirmation of all packing material needed for a shipment
- No reverse action necessary after picking
- Lower packing costs by optimized utilization of packing material
- Long-term analysis of used packing containers
- Integration into SAP standard

*Examples for
packaging materials calculation*

*Even smallest cavities
are filled optimally*

Special Features:

- Consideration of material characteristics in the calculation (e. g. stackable)
- Calculation of alternative measures for foldable materials
- Calculation of least volume of nestable materials
- Filling of cavities in materials
- Consideration of incompatible materials (e. g. heavy and sensitive)
- Consideration of loading capacity of packing material

Space saving packaging

Technical Details:

- SAP ECC 6.0 is technical pre-requisite for the installation
- clavisOptimo can be connected to SAP standard
- User-specific customization of clavisOptimo is possible
